

The all-rounder for video dermoscopy in a new design

Video dermoscopy of skin, hair and nails.

FotoFinder **vexia** is the worldwide benchmark for highest working comfort in video dermoscopy of skin, hair and nails. For the new generation, the FotoFinder developers have combined purist design with proven functionality and stability.

The result: aesthetics in every detail, perfectly matched components and improved cable routing thanks to the elegant Wire Cover. Movable, robust and unconditionally reliable, this device is the ideal choice for every practice or clinic!

The system is installed ready to use and ideally suited for networks thanks to powerful FotoFinder hardware and the future-proof software platform.

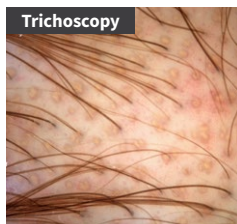

FotoFinder vexia

The flexible imaging system for skin, hair and nails

Dermatologists worldwide appreciate the modular design and the multifunctionality of the FotoFinder **vexia**. The system is perfectly suitable for various fields of application.

Whether you would like to document skin, hair or nails – the device proves to be a reliable partner for the service of patients.

Optional add-ons for skin and hair analysis expand the FotoFinder **vexia** - for even more convenience and functionality in your practice or clinic.

Moleanalyzer pro

Skin analysis powered by Artificial Intelligence (AI)

Extend your FotoFinder **vexia** with the expert system **Moleanalyzer pro** which supports you in many ways in the assessment of skin lesions. With the optional scoring tool based on Artificial Intelligence (AI), you benefit from one of the most powerful deep learning algorithms evaluated in clinical trials* up to now for the analysis and pre-assessment of melanocytic and non-melanocytic skin lesions. Besides, **Moleanalyzer pro** offers you the possibility to request a second opinion from worldwide renowned dermatologists.

medicam 1000s

The benchmark for video dermoscopy

The video camera **medicam 1000s** with CrystalView technology provides brilliant images. In combination with the **D-Scope IV** precision optics, it delivers impressive Full HD quality for micro, macro and clinical images and allows hygienic working thanks to exchangeable front caps. Experience razor-sharp pictures of the various patterns and vascular structures – with optical live zoom, polarized or non-polarized, with or without skin contact.

The **medicam 1000s** is operated intuitively via the panel on the back of the camera. The Full HD live view is seamlessly integrated into the software, making all details already perfectly visible in the live image!

FotoFinder vextra

The all-rounder for Mole Mapping – versatile and reliable.

Versatile in its use:

Cutting-edge FotoFinder technology, installed ready to use as a standalone solution or in a multi-user installation.

New look with proven functionality:

The result: aesthetics in every detail, perfectly matched components.

Dynamic and flexible:

Multi-user management and different interface possibilities for clinic software, plus compatibility with wireless devices, e.g. tablets.

Truly mobile:

The system can be moved from room to room thanks to stable castors.

Future-proof software:

Intuitive software platform with optional **Moleanalyzer pro** and AI Score.

Reliable and secure:

High data security due to powerful hardware and encryption technology.

Brilliant video dermoscopy:

Seamlessly integrated Full HD video camera **medicam 1000s** with CrystalView technology and optical live zoom.

Tidiness thanks to Wire Cover:

The cover protects from annoying wires and ensures our high safety standards all while providing the proper airflow for your **Silent Medical Server**.

Isolating transformer:

Galvanic isolation and network isolator for maximum patient and user safety.
