

meesma

FotoFinder's ultimate portable imaging solution for aesthetics

A full imaging system that fits in one hand

meesma is the new mobile handheld imaging solution for aesthetics that lets you take brilliant and consistent photos of your facial and body treatments from head to toe.

With its intuitive app and cloud or on-premises integration, **meesma** makes it easy and convenient to document your work and showcase your results.

Reveal skin condition with meesma light modes

meesma offers four different light modes to help you assess your patient's skin condition: Neutral light, cross-polarized, parallel-polarized and Wood's light.

Reveal details such as hyperpigmentation, dark spots, redness, and vascular conditions, unveil skin texture, fine lines, and wrinkles in amazing detail and visualize various skin disorders – all with just one handheld device.

Neutral light

Wood's light

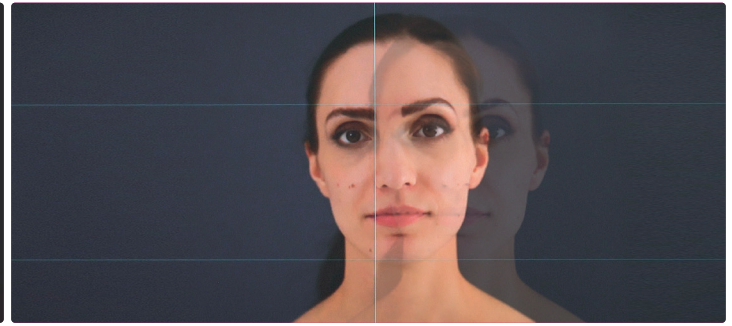

Parallel-polarized light

Cross-polarized light

No limits. No hassle. No compromise.

meesma connects with your iPad via Bluetooth, giving you the freedom to capture, view, edit, and compare images anytime and anywhere. No room for a photo system? No worries, just use your handheld **meesma** with your iPad to capture high-quality images of your aesthetic procedures.

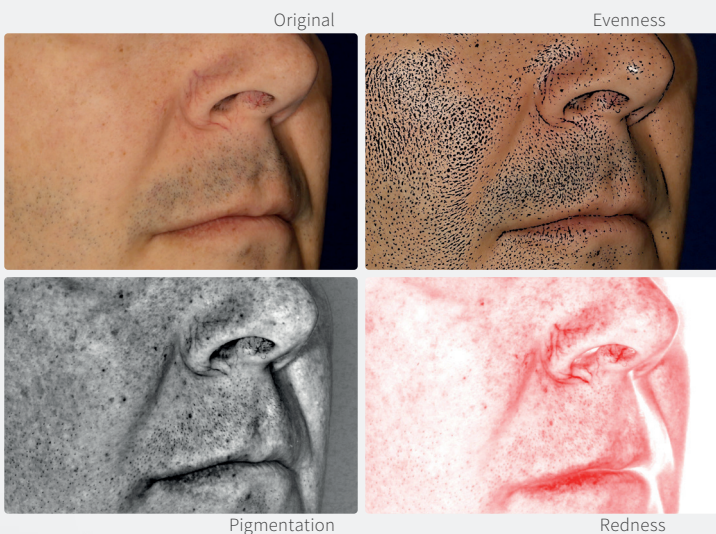

Track progress and boost compliance

FotoFinder's **Ghost feature** helps you align your follow-up images with the initial ones, ensuring accurate tracking of treatment progress and success. Impress your clients with stunning side-by-side comparisons and motivate them to continue with further treatments. **meesma** enhances both conversion and compliance in a relaxed and engaging consultation setting.

Proposer V10

The smart tool for consultation and communication

The new **Proposer V10** enables you to boost your consultations and increase your sales by presenting customized proposals for skincare products and procedures. Comfortably sit together with your patients to review images, visualize skin evenness, pigmentation and redness, and create a detailed personalized treatment plan directly on the app. Who could say no to your proposals?

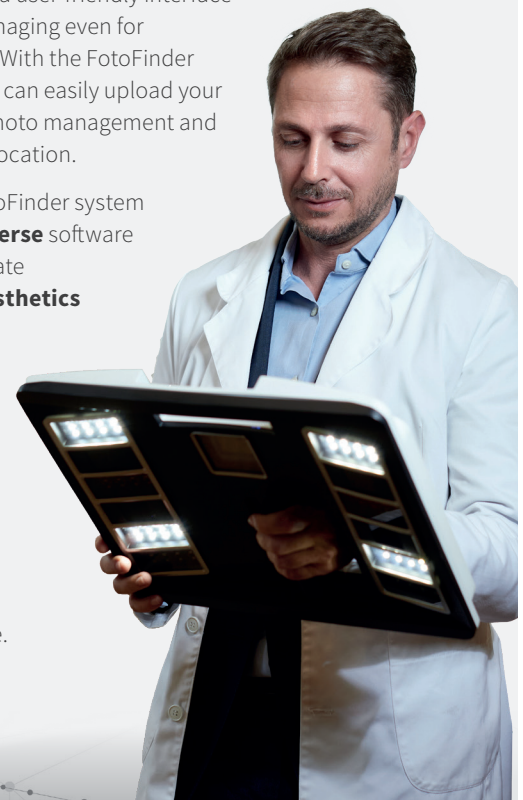

meesma app, cloud storage or local database

You choose!

The **meesma** app offers a user-friendly interface that enables effortless imaging even for photography beginners. With the FotoFinder **Hub cloud** solution, you can easily upload your images for convenient photo management and secure access from any location.

If you already have a FotoFinder system and the FotoFinder **universe** software platform, you can integrate FotoFinder **universe aesthetics** and **meesma** easily.

This way, images from the app are transferred directly into the FotoFinder database through your secure Wi-Fi and you benefit from mobile working in combination with central data storage.

FotoFinder Hub

Your Practice in Cloud

Synchronize your patient database between the **Hub** and your mobile FotoFinder devices and safely store images and data in your personal area. Use advanced features such as **Image Comparison**, FotoFinder **Proposer** or **Treatment Planner**. All users enjoy the same comprehensive set of features – whether you're a small team or a growing enterprise, we've got a plan that fits.
